

Session Title:

Trusted Supplier, Trusted Supply Chain

Presenter:

Renee Ure, VP, Global Supply Chain, Lenovo Data Center Group

Session description:

Trust is a built in drops and lost in buckets, as they quite correctly say. Credibility, reliability, and consistency are pillars of trust. Can you trust your Tier 1 suppliers? What about Tier 2 or 3?

Traditional supplier qualification, validation, onboarding, and lifecycle management can be cumbersome and highly labor-intensive. What has been lacking is a trusted system that can provide visibility and validation throughout the management cycle.

“Trust Your Supplier” is a blockchain-based network that brings a new standard to supplier onboarding and management. The decentralized system transforms fragmented supplier management systems into an autonomous, closed-loop arrangement that enables speed, visibility and audit/verification integration.

Key takeaways:

- The opportunity to join Trust Your Supplier and streamline your supplier management and onboarding.
- Learn to leverage blockchain’s benefits: immutability, decentralization, and transparency to better manage suppliers and third-party relationships.
